

UOF - Messages

Basic message configuration

Table of contents:

- [Message types](#)
- [Special message cases](#)

In this chapter you will find all the different messages available from the Betradar producers in Unified Feed. Messages in the Unified feed are sent on various topics that are intended to provide easy and flexible filtering via message queue (AMQP). For more information about our message system [HERE](#).

AMQP server	mq.betradar.com
AMQP port	5671 (standard SSL for AMQP)
Virtual host	/unifiedfeed/<bookmaker_id> (where <bookmaker_id> is your bookmaker id (see users/whoami.xml endpoint for how to find your bookmaker_id if you are uncertain))
Exchange	unifiedfeed
Username	<your_security_access_token>
Password	<blank>
Queue	You cannot create your own queues. Instead you have to request a server-named queue (empty queue name in the request). Passive, Exclusive, Non-durable.
Version	AMQP 0.9.1

Message types

Here you will find more details about each individual message types available in Unified Feed.

Name	Priority	Description
alive	Low	If not received, something is broken/not working.
bet_cancel	High	Cancel a market due to an error.
bet_settlement	Low	Settle/clear bets for the listed markets and outcomes for a particular event.
bet_stop	High	Specified group of markets for a specified sport event should all change their market status to either suspended or deactivated.
fixture_change	High	Sent when an important fixture change has happened (typically some near-term change, such as a new event or a change to an event (e.g. delayed match)).
odds_change	High	Lists odds changes for some or all markets for a match and signal bet stop for the whole match, individual markets, or outcomes.
rollback_bet_settlement	Low	Undo a previously sent bet settlement that was sent in error.
rollback_bet_cancel	Low	Undo a bet cancel that was sent by mistake.
snapshot_complete	None	Sent after all odds updates from a recovery API request has been sent

Special message cases

Bet settlements for another outcome for correct score markets

Some correct score markets have limited outcomes. If the actual correct score is something different than the outcomes that were offered, there is a choice:

- The bets placed can be considered lost
- The bets placed can be refunded (as the winning outcome wasn't offered).

Betradar intends this to be a configuration option going forward. As it is currently: You will receive a [bet_settlement](#) first from our live-odds [producer](#), where all outcomes are reported as losses, and a second [bet_settlement](#) from the prematch producer, where all outcomes are reported as voided (refunded).
