

UOF - Language support

Language support

Unified Odds supports the same languages as is supported for other Betradar products. The system supports the following 44 languages. The translations are available for sport names, category names, tournament names, team names, player names. If a particular translation is not available for a particular entity, the system defaults to *English*.

Market names are normally translated in all supported languages, and you can also specify your own translations using translation tools.

Country codes

What we call `country_code` is based on ISO 3166-1, meaning we use ISO 3166-1 wherever possible. However, when needed and ISO 3166-1 does not have a representation, we will provide another code. All country codes we use are provided in the tables below.

We use ISO-3166 alpha3 as `country_code` attribute in the endpoints. Alpha3 (Country A3 code) means the three letter abbreviations version of the ISO country codes.

For example the Football team England has no IOC code, instead we use the FIFA code ((ENG) is not terminated with a final)).

We also have the IOC-codes that we will provide in APIs wherever applicable, and as needed.

Info

As explained above, country codes are based on the ISO 3166-1 and IOC-codes wherever possible, provided in the tables below. For a full comparison between all the different code types, please refer to [THIS](#) table.
