

# UOF - Scenarios

Scenarios are sets of sport-events/matches that are prepared by Betradar. Instead of adding individual matches you can add a complete scenario. The sport-events in scenarios are better cached, and it is recommended that you use the scenarios for i.e. stress testing. The complete list is also available [HERE](#), in the /scenario endpoint.

## Play scenario

Queues up the sport-events in the specified scenario. Works very similar to "Start Replay", but queues up the whole scenario and then starts the replay.

**List scenarios** – Lists available scenarios. Currently we provide three scenarios, two stress testing scenarios and one scenario with a mix of all different kinds of events (see [THIS](#) table for more info about individual events). The current available scenarios are:

### Scenario 1) 200 parallel matches

#### XML example

```
<replay_scenarios>
<replay_scenario id="1" description="200 matches parallel" run_parallel="
true">

... Match List ...

</replay_scenario>
```

### Scenario 2) 100 parallel matches

#### XML example

```
<replay_scenario id="2" description="100 matches parallel" run_parallel="
true">

... Match List ...

</replay_scenario>
```

### Scenario 3) Various sport events in parallel

#### XML example

```
<replay_scenario id="3" description="recommended sample events, 42
events of various sports and products" run_parallel="true">

... Match List ...

</replay_scenario>
</replay_scenarios>
```
