

# UOF - Match status

The match status of an event gives an indication of which context the current match is in. This is illustrated in the match\_status attribute. For a complete list of all match statuses please consult our match\_status.xml endpoint in the API found [HERE](#). More information about match statuses can also be found in the [messages](#) section.

## XML example

```
<match_status_descriptions response_code="OK">
  <match_status id="0" description="Not started"/>
  <match_status id="41" description="1st extra"/>
  <match_status id="2" description="2nd period" period_number="2"/>
  <match_status id="70" description="Cancelled"/>
</match_status_descriptions>
```
