XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
Match	server	Which player has the serve at that moment. This is an optional attribute and will be set once the first server is known.	1 = player one 2 = player two.
	gamescore	The point score in the current game. If one player has advantage the score will be 50:40 or 40:50. This attribute is also used for the tiebreak score when the game is in a tiebreak. This attribute needs to be enabled in the XML configuration.	String Example : "15:40"
	tiebreak	Whether a match is in a tiebreak. This attribute needs to be enabledin the XML configuration.	Set to "true" if the match is in a tiebreak.

XML configurations

Sport specific XML configurations for tennis.

(ID: 6) Multiple bets of same type active at once for tennis matches

The Live Odds system selects the most balanced bet (line, spread, etc) out of all available ones for each market, and only this one will be sent out to the client system. Enabling this setting will allow multiple bets of the same type to be sent out at once, not only the most balanced ones. E.g. for the total market in soccer the most balanced line would be 2.5. When enabling the setting, total 1.5 and 3.5 would be sent as well.

(ID: 2) Include tennis tie-break status

Enabling this setting will add an attribute tiebreak to the Match element for tennis matches.

XML example

```
<BetradarLiveOdds xmlns="http://www.betradar.com/BetradarLiveOdds"
status="betstart" time="0" timestamp="1413357074374">
<Match active="1" betstatus="started" matchid="6243888" msgnr="13"
