

# LO - Request score and card summary

To receive a list of all cards and scores for a match you can send a score and card summary request to the server.

### XML example

```
<BookmakerStatus bookmakerid="1240" type="scoreandcardsummary">  
<Match matchid="1355389" />  
</BookmakerStatus>
```

### XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
Bookmaker Status	<i>type</i>	Keyword which describes what kind of request is sent.	String "scoreandcardsummary" (for score and card summary requests)
	<i>bookmakerid</i>	The id of the bookmaker.	Integer
Match	<i>matchid</i>	The id of the match of which the client system wants to receive the score and card summary.	Integer

The response to this request will have the replytype attribute set to scoreandcardsummary.
