

LO - Translations

If you like to get the meta-information translated you can either select the languages you like to include in the Live Odds configuration section, or you can specify this in the meta request.

Meta request with translations

XML example

```
<BookmakerStatus bookmakerid="24" languages="en,nl" type="meta" />
```

XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
Bookmaker Status	<i>type</i>	Keyword which describes what kind of request is sent.	String "meta" (for meta information requests)
	<i>bookmakerid</i>	The id of the bookmaker	Integer
	<i>languages</i>	Optional. A comma separated list with language codes. The translated meta-information will be included inside an element named Translation inside the Match element. Languages and their language codes can be found in the table below.	String

Odds type translations

It is also possible to get translation of all the odds types that are used. This will be sent if you send a *gettranslation* request to the server.

XML example

```
<BookmakerStatus bookmakerid="24" languages="en,nl" type="gettranslation" />
```

XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
Bookmaker Status	<i>type</i>	Keyword which describes what kind of request is sent.	String "gettranslation" (for odds translation requests)
	<i>bookmakerid</i>	The id of the bookmaker	Integer
	<i>languages</i>	Optional. A comma separated list with language codes. Languages and their language codes can be found in the table below.	String

Available languages

Code	Language	Code	Language	Code	Language
