

LO - Wrong XML from client system

If the client system sends a not well-formed or not valid message to the Betradar system, an error message will be returned from the Betradar system.

XML example

```
<BetradarLiveOdds xmlns="http://www.betradar.com/BetradarLiveOdds"
status="error" timestamp="1199783362456">
<Message>The given xml is not well-formed:
<!-- XML which caused the error goes here -->
</Message>
</BetradarLiveOdds>
```

XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
BetradarLiveOdds	status	Keyword which describes what kind of message it is.	String "error" (for error messages)
Message	-	Either "The given xml is not wellformed:", or "The given xml is not valid.", plus the XML message that caused the error.	String
