

LD - Match booking

Match booking can be done using the web interface on www.betradar.com > Live booking calendar, but it's also possible to book matches over the XML feed. Note that booking matches will have a cost depending on the type of agreement you have with Sportradar. Each match booking message must contain 1 match id, i.e. it's only possible to book 1 match per message.

XML example

```
<bookmatch matchid="944423" />
```

XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
bookmatch	matchid	The id of the match which the client wants to book.	Integer

Match booking reply

Reply sent when client books a match. If the match booking failed for some reason (match already bought, match finished etc.), the message will contain an explanation.

XML example

```
<bookmatch matchid="944423" result="valid" message="OK" />
```

XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
bookmatch	matchid	The id of the match which the client wants to book.	Integer
	result	Whether the match was booked successfully or not.	String. Possible values: valid = match booked successfully, invalid = match booking failed
	message	Textual representation of additional information about the booking.	String
