

LD - Server time

Client systems can request the server time. Please note that this is optional, client systems are not required to synchronize their time with the server.

XML example

```
<servertime/>
```

Server time reply

After the server time has been requested, this gets sent back in unix timestamp format.

XML example

```
<servertime value="1244791606937"/>
```

XML attributes definition

Element	Attributes		
	Attribute	Description	Possible values
servertime	value	The server time	UNIX timestamp
